

Document, Clause & Modification Management

1. Document Management

Complete the Document Management module.

You should implement:

- Display all uploaded documents related to a contract.
- View uploaded documents.
- Download uploaded documents.
- Show documents properly on the Contract Details page.

2. Clause Management

Implement complete Clause Management functionality.

Users should be able to:

- Create a new clause.
- View all clauses of a contract.
- Update/Edit a clause.
- Delete a clause.
- Associate clauses with a specific contract.

3. Clause Ordering

Implement proper ordering of clauses within a contract.

Example:

1. Payment Terms
2. Confidentiality
3. Termination
4. Responsibilities

The clause order should be maintained and displayed correctly.

4. Modification Request

Implement functionality for users to create modification requests.

A user should be able to create a modification request for:

- An entire Contract, OR

- A Specific Clause

The Modification Request form should include:

- Select Contract
- Select Clause (optional, depending on modification type)
- Original Value
- Proposed Modification
- Reason/Description

After submission, the modification request should be saved and displayed in the Modification Request list.

5. Modification Request Status

Display the current status of each modification request.

Initial status should be:

PENDING

Example:

Contract/Clause	Requested Change	Status
ABC Agreement	Payment terms update	Pending
Confidentiality Clause	Update clause text	Pending

Expected Complete Flow

Contract Manager:

Create Contract → Upload/View/Download Document → Add/Edit/Delete Clause → Organize Clauses

User:

View Contract → Select Contract or Clause → Create Modification Request → Submit Request → View Request Status
